DBMS PROJECT Using SQL

ON

## *RGIPT STUDENTS DATABASE*

Designed by

RASAMALLA SHASHI PREETAM

Problem Statement

This database aims at providing a centralized view of data of RGIPT(Rajiv Gandhi Institute of Petroleum Technology) students. It is mandatory for every institute to maintain a database to store data of students and their faculty. This database provides information regarding hostel, mess, library, sports, academics of students.

Entity Relationship Diagram

This Entity–relationship model (ER model) describes the structure of RGIPT students database.

Relational Schema

Entity: mess

Attributes:

- Mess ID (Primary Key)
- Mess Name
- Contact
- Menu (Composite attribute with values item1, item2, item3, item4)

Entity: hostel

Attributes:

- Hostel ID (Primary Key)
- Hostel Name
- Hostel In-charge
- Address
- Contact
- Mess ID (Foreign Key Referenced from 'mess')

Entity: sportsdetails

Attributes:

- Sports ID (Primary Key)
- Sports name
- Sport Incharge
- Contact

Entity: department

Attributes:

- Department ID (Primary Key)
- Name
- HOD
- Contact Number
- Email ID

Entity: faculty

Attributes:

- Faculty ID (Primary Key)
- Department ID (Foreign Key Referenced from 'department')
- Name
- Mobile Number
- Areas Of Interest
- Designation
- Email ID

Entity: courses

Attributes:

- Course ID (Primary Key)
- Number Of Credits
- Course Name

Entity: teaches

Attributes:

- Faculty ID (Foreign Key Referenced from 'faculty')
- Course ID (Foreign Key Referenced from 'courses)Primary Key - (Faculty ID, Course ID)

Entity: student

Attributes:

- Registration Number (Primary Key)
- Name
- Year
- Section
- Emai ID
- Phone Number
- Department ID (Foreign Key Referenced from 'department')
- Hostel ID (Foreign Key Referenced from 'hostel')
- Room Number

<u>**Entity:**</u> **plays**

<u>**Attributes:**</u>

- Registration Number (Foreign Key Referenced from 'student')
- Sports I D (Foreign Key Referenced from 'sports details')
- Type Of Player

<u>**Entity:**</u> **library**

<u>**Attributes:**</u>

- Registration Number (Foreign Key Referenced from 'student')
- Book Code (Discriminator for weak entity)
- Date Of Issue (Discriminator for weak entity)
- Date Of Return
- Fine
  Primary Key - (Registration Number, Book Code, Date Of Issue)

<u>**Entity:**</u> **doctor**

<u>**Attributes:**</u>

- Doctor ID (Primary Key)
- Name
- Mobile Number

<u>**Entity:**</u> **dispensary**

<u>**Attributes:**</u>

- Registration Number (Foreign Key Referenced from 'student')
- Op Number (Discriminator for weak entity)
- Admission Date (Discriminator for weak entity)
- Blood Group
- Time
- Doctor ID (Foreign Key Referenced from 'doctor')
- Prescription
  Primary Key – (Registration Number, Op Number, Admission Date)

Entity: studentsemresults

Attributes:

- Registration Number (Foreign Key Referenced from 'student')
- Semester Number (Discriminator for weak entity)
- Semester GPA
- Cumulative GPA
  Primary Key – (Registration Number, Semester Number)

Entity: results

Attributes:

- Registration Number (Foreign Key Referenced from 'student')
- Course ID (Foreign Key Referenced from 'courses')
- Points Obtained
  Primary Key – (Registration Number, Course ID)

Entity: registeredfor

Attributes:

- Registration Number (Foreign Key Referenced from 'student')
- Course ID (Foreign Key Referenced from 'courses')
- Semester Number
  Primary Key – (Registration Number, Course ID)

Normalisation of Tables

Normalization:
1NF

- ➢ A Table is in 1NF when all the attributes contain atomic values(cannot be divided further)
- ➢ No Duplicate rows are allowed.
- ➢ A Column should contain value from the same domain.

Here, In this Database all the tables contain single valued attributes and composite valued attributes are divided into columns So, All the tables are in 1NF.

2NF

- ➢ It should be in 1NF.
- ➢ There should not be any functional dependency

Here, In this Database as we have only tables those have a single candidate key and which is a primary and all also any proper subset of this candidate key do not form any functional dependency with other non-prime attributes. So, All the Tables are in 2NF.

3NF

- ➢ It should be in 2NF.
- ➢ No Transitive Dependency for non-prime attributes.

Here, In this Database only dependency exists for candidate key so there is not possibility of having any transitive dependency. There, they are in 3NF.

BCNF

- ➢ It should be in 3NF.
- ➢ For each non-trivial dependency, the left hand side of dependency is super key.

    Here, As in all the functional dependencies the determinant is candidate key. So the tables are in BCNF.

Actual Database Creation
SQL Queries

Creation of Tables:

Table: mess

```
CREATE TABLE mess(
            MessID NUMBER(5) PRIMARY KEY,
            MessName VARCHAR2(20),
            Contact NUMBER(12),
            item1 VARCHAR2(15),
            item2 VARCHAR2(15),
            item3 VARCHAR2(15),
            item4 VARCHAR2(15)
            );
```

Table: hostel

```
CREATE TABLE hostel(
            HostelID NUMBER(5) PRIMARY KEY,
            HostelName VARCHAR2(50),
            HostelIncharge VARCHAR2(40),
            Address VARCHAR2(40),
            Contact NUMBER(12),
            MessID NUMBER(5),
            FOREIGN KEY (MessID) REFERENCES mess(MessID)
            );
```

Table: sportsdetails

```
CREATE TABLE sportsdetails(
            SportsID NUMBER(5) PRIMARY KEY,
            Sportsname VARCHAR2(15),
            SportIncharge VARCHAR2(40),
            Contact NUMBER(12)
            );
```

Table: department

```
CREATE TABLE department(
                        DepartmentID NUMBER(5) PRIMARY KEY,
                        Name VARCHAR2(50),
                        HOD VARCHAR2(40),
                        ContactNumber Number(12),
                        EmailID VARCHAR2(50)
                        );
```

Table: faculty

```
CREATE TABLE faculty(
                FacultyID NUMBER(7) PRIMARY KEY,
                DepartmentID NUMBER(5),
                Name VARCHAR2(40),
                MobileNumber NUMBER(12),
                AreasOfInterest VARCHAR2(100),
                Designation VARCHAR2(30),
                EmailID VARCHAR2(50),
                FOREIGN KEY (DepartmentID) REFERENCES department(DepartmentID)
                );
```

Table: courses

```
CREATE TABLE courses(
                        CourseID NUMBER(6) PRIMARY KEY,
                        CourseName VARCHAR2(30),
                        NumberOfCredits NUMBER(2)
                        );
```

Table: teaches

```
CREATE TABLE teaches(
                FacultyID NUMBER(7),
                CourseID NUMBER(6),
                FOREIGN KEY (FacultyID) REFERENCES faculty(FacultyID),
                FOREIGN KEY (CourseID) REFERENCES courses(CourseID),
                PRIMARY KEY(FacultyID,CourseID)
                );
```

Table: student

```sql
CREATE TABLE student(
                RegistrationNumber NUMBER(7) PRIMARY KEY,
                Name VARCHAR2(40),
                Year NUMBER(1),
                Section Varchar2(5),
                EmailID VARCHAR2(50),
                PhoneNumber NUMBER(12),
                DepartmentID NUMBER(5),
                HostelID NUMBER(5),
                RoomNumber VARCHAR2(7),
                FOREIGN KEY (HostelID) REFERENCES hostel(HostelID),
                FOREIGN KEY (DepartmentID) REFERENCES department(DepartmentID)
                );
```

Table: plays

```sql
CREATE TABLE plays(
            RegistrationNumber NUMBER(7),
            SportsID NUMBER(5),
            TypeOfPlayer VARCHAR2(15),
            FOREIGN KEY (SportsID) REFERENCES sportsdetails(SportsID),
            FOREIGN KEY (RegistrationNumber) REFERENCES student(RegistrationNumber)
            );
```

Table: library

```sql
CREATE TABLE library(
                RegistrationNumber NUMBER(7),
                BookCode VARCHAR2(10),
                DateOfIssue DATE,
                DateOfReturn DATE,
                Fine NUMBER(5,2),
                FOREIGN KEY (RegistrationNumber)
                    REFERENCES student(RegistrationNumber),
                PRIMARY KEY(RegistrationNumber,BookCode,DateOfIssue)
                );
```

Table: doctor

```sql
CREATE TABLE doctor(
                DoctorID NUMBER(7) PRIMARY KEY,
                Name VARCHAR2(40),
                MobileNumber NUMBER(12)
                );
```

Table: dispensary

```sql
CREATE TABLE dispensary(
                RegistrationNumber NUMBER(7),
                OpNumber NUMBER(10),
                BloodGroup VARCHAR2(5),
                AdmissionDate DATE,
                Time VARCHAR2(10),
                DoctorID NUMBER(7),
                prescription VARCHAR2(100),
                FOREIGN KEY (DoctorID) REFERENCES doctor(DoctorID),
                FOREIGN KEY (RegistrationNumber)
                    REFERENCES student(RegistrationNumber),
                PRIMARY KEY (RegistrationNumber,OpNumber,AdmissionDate)
                );
```

Table: student sem results

```sql
CREATE TABLE studentsemresults(
                RegistrationNumber NUMBER(7),
                SemesterNumber NUMBER(1),
                SemesterGPA NUMBER(3,2),
                CumulativeGPA NUMBER(3,2),
                FOREIGN KEY (RegistrationNumber)
                    REFERENCES student(RegistrationNumber),
                PRIMARY KEY (RegistrationNumber,SemesterNumber)
                );
```

Table: results

```sql
CREATE TABLE results(
                RegistrationNumber NUMBER(7),
                CourseID NUMBER(6),
                PointsObtained NUMBER(2),
                FOREIGN KEY (CourseID) REFERENCES courses(CourseID),
                FOREIGN KEY (RegistrationNumber)
                    REFERENCES student(RegistrationNumber),
                PRIMARY KEY(RegistrationNumber,CourseID)
                );
```

Table: registered for

```sql
CREATE TABLE registeredfor(
                RegistrationNumber NUMBER(7),
                CourseID NUMBER(6),
                SemesterNumber NUMBER(1),
                FOREIGN KEY (RegistrationNumber)
                    REFERENCES student(RegistrationNumber),
                FOREIGN KEY (CourseID) REFERENCES courses(CourseID),
                PRIMARY KEY(RegistrationNumber,CourseID)
                );
```

Insertion of values into tables:

Table: mess

INSERT INTO mess(MessID,MessName,Contact,item1,item2,item3,item4)VALUES(41021,'IFA-A',7849561230,'Puri','Aloo Curry','Chole Curry',null);
